# ADVANCE SAFETY CONSULTING

## PROCESS SAFETY MANAGEMENT

Process Safety Management (PSM) can be defined as a management system that applies by company through proactive approach in identifying, defining, and controlling toward hazards of the whole activities and process in attempt of creating safety working environment.

## CONTRACTOR SAFETY MANAGEMENT SYSTEM

Contractor Safety Management System (CSMS) is very important for company to support HSE team and users in preparing initial selection process before contractor, vendor, and supplier do their work in their environment, where the third party must comply and follow the management system's rules that is applied by company.

## FIRE RISK ASSESSMENT

It is the responsibility of all people to beware of fires breaking out in their working environment. In the implementation of Fire Risk Assessment/FRA (assessment related to the risk of fire), the scope includes building structure, escaping manners and procedures, detection alarm, Emergency Response Procedure, Training and terms/conditions that exists in the organization related to fire safety.

## BEHAVIOUR BASED SAFETY

Promoting behavior based safety in working place is one of the essential part in occupational, health and safety, because the system that is currently applied does not guarantee that the occupational health and safety aspects are already successfully implemented. For that, the chance of success is also determine by how the organization able to revive the aspects of occupational health and safety and to be cultured in their company.

## HAZARD AND OPERABILITY STUDY (HAZOP)

HAZOP is a standard technique that is used in forming safety drafts in a new system or in the presence of potential hazards or operational issues by identifying and evaluating hazards in the planned process or in the existing one or operating in effective ways, economy and on time when all considerations and issues are relevantly accounted.

## HAZARD IDENTIFICATION (HAZID)

Hazard Identification is a study that diagnoses hazards from both process and non-process. This implementation is purposed to devise and manage issues both safety and environment.

## EMERGENCY EXERCISE

Emergency Exercise Management (Emergency Exercise) is purposed to manage risks and enhance company's performance through strategic and business process, value added, change management approaches.

## ISC Safety School

ISC Safety School supports the development of competencies of safety or HSE in Indonesia. With the existence of learning center, ISC Safety School is expected to be able to deliver beneficial impacts for HSE practitioners to develop their competencies in HSE field, for that ISC Safety school conduct HSE trainings that referring to both national and international standards.
